

# TS 400B

High-performance professional battery-powered electrostatic spraying equipment

The TS 400Bs electrostatic sprayer is a portable, self-contained, battery-powered unit that allows you to disinfect all types of spaces in a professional, efficient, and cost-effective manner.

It is a highly functional device that allows the user to carry out work without the need for an electrical connection. Its great maneuverability makes the TS 400B ideal for carrying out work in different spaces in all types of installations, whatever their size. It is fast, efficient and offers great coverage.

## FEATURES

- High impact polymer structure housing
- Lithium battery life 2 hours autonomy
- Stainless steel connectors
- Injected rubber wheels
- 2.5 m hose
- Lightweight for daily use
- Very practical and easy to carry
- Uniform coverage
- Quiet operation
- Digital battery reader
- Separate starter connector

Dimensions	51.9 x 36.8 x 54,4 cm
Net weight	18,1 Kg
Reach	Up to 3,5m
Battery	24V 30Ah
Speed Flow	Up to 90/110 ml/min
Drop size	40 microns

**MADE IN SPAIN**  
Complies with EC standards

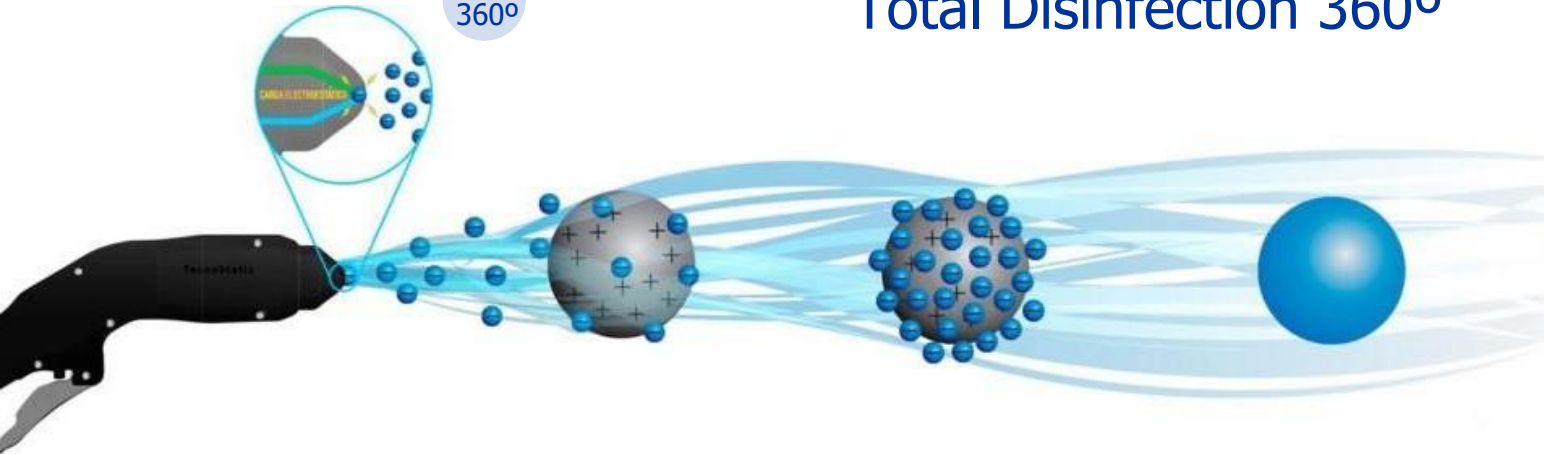

**TOP QUALITY**  
It incorporates the latest technology

**TECHNICAL SERVICE**  
24/48 HOURS  
We attend you with fast and efficient

## Total Disinfection 360°

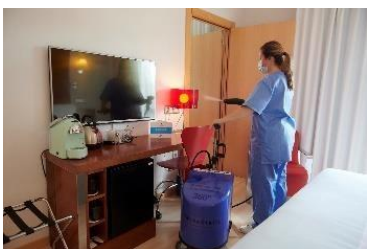

# THE ELECTROSTATIC WRAP-AROUND TECHNOLOGY OF TS 400B

The solution for disinfecting rooms and surfaces in all sectors and industries

The TS 400B operates by electrostatic spraying, an innovative technology patented by TecnoStatic. Its "wrap-around" feature provides 360° integral disinfection, saving disinfectant solution, time and manpower.

Electrostatic spraying consists of applying electrical charges to the disinfectant liquids. When these liquids are sprayed, the droplets are attracted by the electrical charge of opposite sign of the surfaces, adhering to them in a precise and uniform way.

TS 400B achieves a superior sanitisation than that offered by conventional systems, as it reaches the entire surface of the objects, even those corners that are difficult to access. It does not require electrical connection, which makes it very versatile in places with difficult access or lack of electrical connection. With its lithium battery, it has an autonomy of up to 2-3 hours.

### TOTAL COVERAGE

Spraying is uniform and precise, covering all areas, even the less accessible ones.

### PREVENTING CROSS CONTAMINATION

Prevents the spread of bacteria, germs or viruses from one surface to another

### CONSIDERABLE COST SAVINGS

Application times are significantly reduced

### ASEPSIS GUARANTEE

It is not necessary to touch the surfaces and objects to be disinfected.

### SHORTER DRYING TIME

Spraying creates a very fine layer that dries quickly

### RESPECT FOR THE ENVIRONMENT

The minimum necessary amount of chemical is used

We manufacture with your brand/logo injected into the housing, please contact us.
